<sup>2</sup> Unless otherwise noted, all references in this TER are from the 2018 version of the codes and the standards referenced therein. This material, design, or method of construction also complies with the 2000-2015 versions of the referenced codes and the standards referenced therein.

<sup>3</sup> All terms defined in the applicable building codes are italicized.

### 3 PERFORMANCE EVALUATION

- 3.1 PowerLag® fasteners were evaluated to determine their ability to provide code complying attachment of deck ledger boards to the building structure.
- 3.2 For conventionally framed buildings, the ledger is required to be attached to the band joist in accordance with IBC Section 1604.8.3 and IRC Section R507.8<sup>4</sup> as applicable. Figure 1 is included below for reference.

CONNECTION DETAILS	JOIST SPAN						
	6' and less	6'1" to 8'	8'1" to 10'	10'1" to 12'	12'1" to 14'	14'1" to 16'	16'1" to 18'
	On-center spacing of fasteners						
1/2-inch diameter lag screw with 1/2-inch maximum sheathing <sup>c, d</sup>	30	23	18	15	13	11	10
1/2-inch diameter bolt with 1/2-inch maximum sheathing <sup>d</sup>	36	36	34	29	24	21	19
1/2-inch diameter bolt with 1-inch maximum sheathing <sup>e</sup>	36	36	29	24	21	18	16

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 pound per square foot = 0.0479 kPa.

- a. Ledgers shall be flashed in accordance with Section R703.4 to prevent water from contacting the house band joist.
- b. Snow load shall not be assumed to act concurrently with live load.
- c. The tip of the lag screw shall fully extend beyond the inside face of the band joist.
- d. Sheathing shall be wood structural panel or solid sawn lumber.
- e. Sheathing shall be permitted to be wood structural panel, gypsum board, fiberboard, lumber or foam sheathing. Up to 1/2-inch thickness of stacked washers shall be permitted to substitute for up to 1/2 inch of allowable sheathing thickness where combined with wood structural panel or lumber sheathing.

FIGURE 1. IRC TABLE 507.9.1.3(1)<sup>5</sup>: DECK LEDGER CONNECTION TO BAND JOIST<sup>A,B</sup>  
(DECK LIVE LOAD = 40 PSF, DECK DEAD LOAD = 10 PSF, SNOW LOAD <40 PSF)

- 3.2.1 Where a band joist is not used, as in some truss installations, an engineered design is required. See Appendix A for additional code requirements for ledger attachments.
- 3.3 Ultimate connection capacities and deflections of typical ledger board connections were match tested and evaluated in accordance with the *IRC* and *IBC*. See Appendix B for a description of testing methods.
- 3.4 Corrosion resistance in accordance with *ASTM B117* and *ASTM G85 Annex A5*.
- 3.5 Any code compliance issues not specifically addressed in this section are outside the scope of this TER.
- 3.6 Any engineering evaluation conducted for this TER was performed within DrJ's ANAB accredited ICS code scope and/or the defined professional engineering scope of work on the dates provided herein.

<sup>4</sup> 2015 *IRC* Section R507.1, 2009 *IRC* Section R502.2.2

<sup>5</sup> 2015 *IRC* Table R507.2

## 4 PRODUCT DESCRIPTION AND MATERIALS

4.1 The product evaluated in this TER is shown in Figure 2.

FIGURE 2. POWERLAG® FASTENERS (IN)

- 4.2 PowerLag® fasteners are manufactured with carbon steel grade 1022 or 10B21 wire conforming to *ASTM A510*, or grade 17MnB3 or 19MnB4 wire conforming to *DIN 1654*.
- 4.3 PowerLag® fasteners are manufactured using a standard cold-formed process followed by a heat-treating process. Allowable bending yield and critical dimensions are found in Figure 2 and Table 1.
  - 4.3.1 PowerLag® fastener heads are a 7/16" hex drive or a T-40 T-star drive.
  - 4.3.2 PowerLag® fasteners have a gimlet point.
- 4.4 PowerLag® fasteners are available with proprietary coatings HCR™ and HCR-X™ that exceed the protection provided by code approved hot-dipped galvanized coatings meeting *ASTM A153 (IBC Section 2304.10.5<sup>6</sup> and IRC Section R317.3)*.
  - 4.4.1 HCR™ coating is approved for use in ground contact and pressure treated wood (Alkaline Copper Quaternary, ACQ) in general construction (freshwater) applications.
  - 4.4.2 HCR-X™ coating is approved for use in ground contact and pressure treated wood (ACQ) in coastal construction (saltwater) applications.
- 4.5 HCR™ and HCR-X™ Coated Fasteners are approved for use in fire-retardant-treated lumber, provided the conditions set forth by the fire-retardant-treated lumber manufacturer are met, including appropriate strength reductions.
- 4.6 The fasteners evaluated in this TER are set forth in Table 1.

<sup>6</sup> 2012 IBC Section 2304.9.5

TABLE 1. FASTENER SPECIFICATIONS

Fastener Name	Head (in)				Lengths (in)		Diameters (in)			Bending Yield Strength <sup>3</sup> , f <sub>yb</sub> (psi)
	Style	Marking	Diameter	Thickness	Fastener <sup>1</sup>	Thread <sup>2</sup>	Shank	Minor	Major	
PowerLag® (5/16")	Hex	4	0.591	0.248	4	2.993	0.217	0.189	0.315	150,000
	T-Star		0.776	0.140		2.375				
	Hex	5	0.591	0.248	5	2.375				
	T-Star		0.776	0.140		2.375				

SI: 1" = 25.4 mm, 1 lb = 4.45 N, 1 psi = 0.00689 MPa

1. Fastener length is measured from the underside of the head to the tip.
2. Thread length includes tip; see Figure 1.
3. Determined in accordance with methods specified in *ASTM F1575*, based on minor thread diameter using a 5% offset of the load displacement curves developed from bending tests.

4.7 In-plant quality control procedures, under which the PowerLag® fasteners are manufactured, are audited through an inspection process performed by an approved agency.

## 5 APPLICATIONS

- 5.1 PowerLag® fasteners are used for attaching the deck ledger to the band joists of a building in accordance with *IBC Section 1604.8.3* and *IRC Section R507.9<sup>7</sup>*.
- 5.2 PowerLag® fasteners are installed without lead holes as prescribed in *NDS*.
  - 5.2.1 The *IRC* provides prescriptive fastener spacing for the attachment of a deck ledger to a band joist with 1/2"-diameter lag screws or through bolts as shown in *IRC Table R507.9.1.3(1)*. Table 2 provides PowerLag® fastener spacing required to provide performance at least equivalent to the lag screws found in *IRC Table R507.9.1.3(1)*<sup>8</sup> in accordance with *IBC Section 104.11* and *Section 1604.8.3* and *IRC Section R104.11* and *Section R507.9<sup>7</sup>* in accordance with generally accepted engineering practice. Table 2 provides PowerLag® fastener spacing for items found in *IRC Table R507.9.1.3(1)*<sup>8</sup>, as well as a wider range of materials commonly used for band joists.
  - 5.2.2 In addition, an alternate loading condition (i.e., deck live load = 60 psf, deck dead load = 10 psf) required by some jurisdictions is shown.
- 5.3 The maximum deck joist spans in ledger connection applications for PowerLag® fasteners are specified in Table 2 and Figure 3.
  - 5.3.1 When installed in accordance with the spacing requirements of Table 2, PowerLag® fasteners provide equivalent performance to *IRC Table R507.9.1.3(1)*<sup>8</sup>.
- 5.4 Where the application exceeds the limitations set forth herein, design shall be permitted in accordance with accepted engineering procedures, experience, and technical judgment.

<sup>7</sup> 2015 *IRC Section R507.2*

<sup>8</sup> 2015 *IRC Table R507.2*

TABLE 2. POWERLAG® FASTENER SPACING FOR MAXIMUM DECK JOIST SPANS<sup>1,6,7,8,12</sup>

Loading Condition (Live Load, psf)	Head Type	Fastener Length <sup>2,4,5</sup> (in)	2x Nominal Ledger Species <sup>3,9,10</sup>	Band Joist Material <sup>11</sup>	Maximum Deck Joist Spans						
					Up to 6'	Up to 8'	Up to 10'	Up to 12'	Up to 14'	Up to 16'	Up to 18'
					Maximum On-Center Spacing of PowerLag® Fasteners						
40	T-Star	4 or 5	HF/SPF	Sawn Lumber	22	16	16	15	12	11	10
				1" min EWP	23	17	16	15	13	11	10
			DF/SP	Sawn Lumber	34	25	20	17	13	12	10
				1" min EWP	23	17	16	14	12	11	9
	Hex Head		HF/SPF	Sawn Lumber	28	21	17	12	11	9	8
				1" min EWP	21	14	11	9	8	7	6
DF/SP	Sawn Lumber		30	22	18	12	10	9	8		
	1" min EWP		26	19	16	13	11	10	8		
60	T-Star		HF/SPF	Sawn Lumber	16	16	12	10	9	8	7
				1" min EWP	16	16	13	11	9	8	7
			DF/SP	Sawn Lumber	24	18	13	11	9	8	7
				1" min EWP	16	15	12	10	9	7	7
	Hex Head	HF/SPF	Sawn Lumber	20	13	11	9	7	6	6	
			1" min EWP	14	10	8	7	6	5	4	
		DF/SP	Sawn Lumber	21	1	10	8	7	6	5	
			1" min EWP	18	14	11	9	8	7	6	

SI: 1" = 25.4 mm

- Based on load duration of 1.0. Spacing may be adjusted by the applicable load duration as specified in *NDS*.
- Fasteners are required to have full thread penetration into the main member. Excess fastener length extending beyond the main member is not reflected in the table above.
- Solid sawn ledgers shall be HF/SPF or DFL/SP species (specific gravity of 0.42 and 0.50 respectively), designed by others.
- Fastener spacing for 4" fasteners is based on tested loads. The design values use the lesser of a 1/8" deflection or a factor of safety equivalent to or greater than that of the code compliant lag screw application. See Figure 3.
- Fastener spacing for 5" fasteners is based on previously published reference lateral design values.
- Fasteners shall be staggered from the top to the bottom along the length of the ledger while maintaining the required edge and end distances as shown in Figure 3.
- A maximum 5/8" structural sheathing may be installed between the ledger and the band joist.
- Table values assume 10 psf dead load.
- Ledger materials assumed to be in wet service condition.
- Minimum ledger board requirements: 1 1/2" thickness and 7 1/2" depth
- Minimum band joist requirements: SPF (specific gravity of 0.42) solid-sawn lumber 1 1/2" thick and 7 1/2" depth; EWP 1.0" thick and 7 1/4" depth
- Tabulated on-center spacing values are applicable where a third party tested plastic washer (e.g. Deck2Wall® Spacer) is installed between the ledger board and band joist at each fastener location. The plastic washer shall be installed per the washer manufacturer's instructions and this TER. The plastic washer shall be 2" in diameter, 1/2" thick (max), with an approximate 5/16" hole in the center for the PowerLag® and three 3/16" (approx.) holes for the #8 screws. The plastic washer shall be independently fastened to the ledger with three SPAX® #8x1-5/8" or three SPAX® #8x2" screws.

## 6 INSTALLATION

- 6.1 Installation shall comply with the manufacturer's installation instructions and this TER. In the event of a conflict between the manufacturer's installation instructions and this TER, the more restrictive shall govern.
- 6.2 The 5/16" PowerLag® structural wood fastener must be installed with a 1/2" (12.7 mm), low rpm/high torque electric drill (450 rpm) or impact wrench using the appropriate driver bit. Drive the fasteners through the ledger and sheathing into the band joist until the built-in washer head is drawn firm and flush to the ledger board. Do not overdrive.
- 6.3 Install PowerLag® fasteners such that the threads fully engage the band joist material and the fastener tip extends beyond the back face of the band joist material when fully seated against the installed ledger.
- 6.3.1 A third party tested plastic washer (e.g., Deck2Wall® Spacer) may be installed between the ledger board and band joist at each fastener location. The plastic washer shall be installed per the washer manufacturer's instructions and this TER.
  - 6.3.1.1 The third party tested plastic washer shall be 2" in diameter, 1/2" thick (max), with an approximate 5/16" hole in the center for the PowerLag® and three 3/16" (approx.) holes for the #8 screws.
  - 6.3.1.1.1 The third party tested plastic washer shall be independently fastened to the ledger with three SPAX® #8x1-5/8" or three SPAX® #8x2" screws.
- 6.4 Lead holes are not required.
- 6.5 Figure 3 shows a detail of the PowerLag® fastener deck connection, including minimum edge and end distances.
- 6.6 Stagger the PowerLag® fasteners from the top to the bottom along the length of the ledger while maintaining the required edge and end distances.

FIGURE 3. POWERLAG® FASTENER DECK CONNECTION

- 6.7 For applications outside the scope of this TER, an engineered design is required.

## 7 SUBSTANTIATING DATA

- 7.1 Testing has been performed under the supervision of a professional engineer and/or under the requirements of ISO/IEC 17025 as follows:
  - 7.1.1 Bending yield, shear, and tensile strength testing in accordance with *ASTM F1575*
  - 7.1.2 Lateral resistance and withdrawal resistance testing in accordance with *ASTM D1761*
  - 7.1.3 Head pull-through resistance testing in accordance with *ASTM D1037*
  - 7.1.4 Corrosion resistance testing in accordance with *ASTM B117* and *ASTM G85, Annex A5*
  - 7.1.5 Deck ledger assembly testing in general accordance with *ASTM D1761*
- 7.2 *DCA 6, Prescriptive Residential Wood Deck Construction Guide; AF&PA; 2010*
- 7.3 Information contained herein is the result of testing and/or data analysis by sources which conform to *IBC Section 1703* and/or professional engineering regulations. DrJ relies upon accurate data to perform its ISO/IEC 17065 evaluations.
- 7.4 Where appropriate, DrJ's analysis is based on provisions that have been codified into law through state or local adoption of codes and standards. The providers of the codes and standards are legally responsible for their content. DrJ analysis may use code-adopted provisions as a control sample. A control sample versus a test sample establishes a product as being equivalent to that prescribed in this code in quality, strength, effectiveness, fire resistance, durability, and safety. Where the accuracy of the provisions provided herein is reliant upon the published properties of materials, DrJ relies upon the grade mark, grade stamp, mill certificate, and/or test data provided by material suppliers to be minimum properties. DrJ analysis relies upon these properties to be accurate.

## 8 FINDINGS

- 8.1 When used in accordance with this TER and the manufacturer's installation instructions, PowerLag® fasteners are a suitable alternative to the requirements of the *IBC Section 1604.8.3* and *IRC Section R507.9*<sup>9</sup>.
  - 8.1.1 PowerLag® fasteners with HCR™ coating is approved for use in ground contact and pressure treated wood (ACQ) in general construction (freshwater) applications.
  - 8.1.2 PowerLag® fasteners with HCR-X™ coating is approved for use in ground contact and pressure treated wood (ACQ) in coastal construction (saltwater) applications.
- 8.2 HCR™ and HCR-X™ Coated Fasteners are approved for use in fire-retardant-treated lumber, provided the conditions set forth by the fire-retardant-treated lumber manufacturer are met, including appropriate strength reductions.
- 8.3 This product has been evaluated in the context of the codes listed in Section 2 and is compliant with all known state and local building codes. Where there are known variations in state or local codes applicable to this TER, they are listed here.
  - 8.3.1 No known variations
- 8.4 Building codes require data from valid research reports be obtained from approved sources (i.e., licensed registered design professionals [RDPs]).
  - 8.4.1 Building official approval of a licensed RDP is performed by verifying the RDP and/or their business entity is listed by the licensing board of the relevant jurisdiction.
- 8.5 Agencies who are accredited through ISO/IEC 17065 have met the code requirements for approval by the building official. DrJ is an ISO/IEC 17065 ANAB-Accredited Product Certification Body – Accreditation #1131 and employs RDPs.

<sup>9</sup> 2015 IRC Section 507.2

8.6 Through ANAB accreditation and the [IAF MLA](#), DrJ certification can be used to obtain product approval in any *jurisdiction* or country that has [IAF MLA Members & Signatories](#) to meet the [Purpose of the MLA](#) – “certified once, accepted everywhere.”

8.7 [IBC Section 104.11](#) ([IRC Section R104.11](#) and [IFC Section 104.9](#) are similar) states:

**104.11 Alternative materials, design and methods of construction and equipment.** The provisions of this code are not intended to prevent the installation of any material or to prohibit any design or method of construction not specifically prescribed by this code...Where the alternative material, design or method of construction is not *approved*, the *building official* shall respond in writing, stating the reasons the alternative was not *approved*.

## 9 CONDITIONS OF USE

- 9.1 PowerLag® fasteners covered by this TER shall be installed in accordance with Section 6 of this report and the manufacturer’s installation instructions.
- 9.2 PowerLag® fastener spacing shall not exceed Table 2 for code compliance and the installation conditions considered.
- 9.3 For conditions not covered in this TER, connections shall be designed in accordance with generally accepted engineering practice.
- 9.4 PowerLag® fasteners are produced under a quality control program subject to periodic inspections in accordance with [IBC Section 1703.5.2](#).
- 9.5 Where required by the *building official*, also known as the authority having jurisdiction (AHJ) in which the project is to be constructed, this TER and the installation instructions shall be submitted at the time of *permit* application.
- 9.6 Any generally accepted engineering calculations needed to show compliance with this TER shall be submitted to the AHJ for review and approval.
- 9.7 *Design loads* shall be determined in accordance with the building code adopted by the *jurisdiction* in which the project is to be constructed and/or by the building designer (e.g., *owner* or RDP).
- 9.8 At a minimum, this product shall be installed per Section 6 of this TER.
- 9.9 This product has an internal quality control program and a third-party quality assurance program in accordance with [IBC Section 104.4](#) and [Section 110.4](#) and [IRC Section R104.4](#) and [Section R109.2](#).
- 9.10 The actual design, suitability, and use of this TER, for any particular building, is the responsibility of the *owner* or the owner's authorized agent.
- 9.11 This TER shall be reviewed for code compliance by the AHJ in concert with [IBC Section 104](#).
- 9.12 The implementation of this TER for this product is dependent on the design, quality control, third-party quality assurance, proper implementation of installation instructions, inspections required by [IBC Section 110.3](#), and any other code or regulatory requirements that may apply.

## 10 IDENTIFICATION

- 10.1 The product(s) listed in Section 1.1 are identified by a label on the board or packaging material bearing the manufacturer’s name, product name, TER number, and other information to confirm code compliance.
- 10.2 Additional technical information can be found at [spax.us](#).

## 11 REVIEW SCHEDULE

- 11.1 This TER is subject to periodic review and revision. For the most recent version, visit [drjcertification.org](#).
- 11.2 For information on the current status of this TER, contact [DrJ Certification](#).

## APPENDIX A

### Code Requirements for Ledger Attachments

For guidance on designing the connection of the deck ledger to trusses where a band joist is not used, see SBCA's Tech Note, [Attachment of Residential Deck Ledger to Metal Plate Connected Wood Truss Floor System](#).

- 1) [IRC Section R507.8](#)<sup>10</sup> contains the following code requirements ([IBC Section 1604.8.3](#) is similar):
  - a) Where supported by attachment to an exterior wall, decks shall be positively anchored to the primary structure and designed for both vertical and lateral loads.
    - i) Attachment shall not be accomplished by the use of toenails or nails subject to withdrawal.
- 2) [IRC Section R507.9.1](#) details how vertical loads shall be transferred to band joists with ledgers:
  - a) [IRC Section R507.9.1.1](#)  
 Deck ledgers shall be a minimum 2-inch by 8-inch (51 mm by 203 mm) nominal, pressure-preservative-treated Southern pine, incised pressure-preservative-treated hem-fir, or approved, naturally durable, No. 2 grade or better lumber...
  - b) [IRC Section R507.9.1.2](#)  
 Band joists supporting a ledger shall be a minimum 2-inch-nominal (51 mm), spruce-pine-fir or better lumber or a minimum 1-inch by 9½-inch (25 mm x 241 mm) dimensional, Douglas fir or better, laminated veneer lumber. Band joists shall bear fully on the primary structure capable of supporting all required loads.
  - c) [IRC Section R507.9.1.3](#)<sup>11</sup>  
 Fasteners used in deck ledger connections in accordance with Table R507.9.1.3(1) shall be hot-dipped galvanized or stainless steel and shall be installed in accordance with Table R507.9.1.3(2) and Figures R507.9.1.3(1) and R507.9.1.3(2).

**IRC FIGURE R507.9.1.3(2):**

### PLACEMENT OF LAG SCREWS AND BOLTS IN BAND JOISTS

<sup>10</sup> 2012 IRC Section R507.1, 2015 IRC Section R507.1

<sup>11</sup> 2012 IRC Section R507.2, 2015 IRC Section R507.2

d) Tables R507.9.1.3(1) and R507.9.1.3(2)<sup>12</sup> cover the placement of lag screws or bolts in deck ledgers:

The tip of the lag screw shall fully extend beyond the inside face of the band joist

Lag screws or bolts shall be staggered from the top to the bottom along the horizontal run of the deck ledger in accordance with Figure R507.9.1.3(1)

The minimum distance from bottom row of lag screws or bolts to the top edge of the ledger shall be in accordance with Figure R507.9.1.3(1).

CONNECTION DETAILS	JOIST SPAN						
	6' and less	6'1" to 8'	8'1" to 10'	10'1" to 12'	12'1" to 14'	14'1" to 16'	16'1" to 18'
	On-center spacing of fasteners						
1/2-inch diameter lag screw with 1/2-inch maximum sheathing <sup>c, d</sup>	30	23	18	15	13	11	10
1/2-inch diameter bolt with 1/2-inch maximum sheathing <sup>d</sup>	36	36	34	29	24	21	19
1/2-inch diameter bolt with 1-inch maximum sheathing <sup>e</sup>	36	36	29	24	21	18	16

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 pound per square foot = 0.0479 kPa.

- a. Ledgers shall be flashed in accordance with Section R703.4 to prevent water from contacting the house band joist.
- b. Snow load shall not be assumed to act concurrently with live load.
- c. The tip of the lag screw shall fully extend beyond the inside face of the band joist.
- d. Sheathing shall be wood structural panel or solid sawn lumber.
- e. Sheathing shall be permitted to be wood structural panel, gypsum board, fiberboard, lumber or foam sheathing. Up to 1/2-inch thickness of stacked washers shall be permitted to substitute for up to 1/2 inch of allowable sheathing thickness where combined with wood structural panel or lumber sheathing.

**TABLE 507.9.1.3(1):**

DECK LEDGER CONNECTION TO BAND JOIST<sup>a,b</sup> (Deck live load = 40 psf, deck dead load = 10 psf, snow load ≤40 psf)

MINIMUM END AND EDGE DISTANCES AND SPACING BETWEEN ROWS				
	TOP EDGE	BOTTOM EDGE	ENDS	ROW SPACING
Ledger <sup>a</sup>	2 inches <sup>d</sup>	3/4 inch	2 inches <sup>b</sup>	1 5/8 inches <sup>b</sup>
Band Joist <sup>c</sup>	3/4 inch	2 inches	2 inches <sup>b</sup>	1 5/8 inches <sup>b</sup>

For SI: 1 inch = 25.4 mm.

- a. Lag screws or bolts shall be staggered from the top to the bottom along the horizontal run of the deck ledger in accordance with Figure R507.9.1.3(1).
- b. Maximum 5 inches.
- c. For engineered rim joists, the manufacturer's recommendations shall govern.
- d. The minimum distance from bottom row of lag screws or bolts to the top edge of the ledger shall be in accordance with Figure R507.9.1.3(1).

**FIGURE R507.9.1.3(1):**  
PLACEMENT OF LAG SCREWS AND BOLTS IN LEDGERS

## APPENDIX B

### Testing Procedure and Methodology

1. To determine the strength and load-deflection performance of the fasteners in a ledger connection, a two-joint assembly with connection of a ledger to a band joist was created. Load was applied to the joists, which transferred load to the ledger via hangers. String potentiometers were placed along the bottom of the ledger to measure vertical deflection during the test, while a load cell attached to an actuator measured load applied. The band joist was fixed to prevent deflection and rotation during the test. To limit the variability, the comparison product was tested simultaneously with the PowerLag® fasteners with ledgers and band joists cut congruently from the same piece of lumber. Immediately after testing, a section was cut near each fastener location to determine the moisture content and oven-dry specific gravity of each piece of lumber.
2. The performance of the code defined lag screw connection was then compared to the performance of the PowerLag® fasteners in the ledger application built per the code requirements.
  - 2.1. Testing was undertaken to directly compare fastener performance using matched lumber specimen testing where the PowerLag® fastener was tested side by side with ½" diameter lag screws (see [Figure 4](#)).

**Figure 4:** Single & Three-Fastener Setups

- 2.1.2. The testing and resulting analysis define comparative performance and the design parameters required for PowerLag® fasteners to be considered an equivalent alternative to the specified fasteners required by the building code in accordance with the provisions of [IBC Section 104.11](#) and [IRC Section R104.11](#).
